Dear executive,

For end customers as well as EPC (Engineering, Procurement and Construction) contractors, the ability to find a suitably experienced partner is essential to undertake a project of any size in the energy industry. Likewise, Belgian-based suppliers and (sub)contractors need to optimally present their knowhow in order to get involved in foreign projects.

The Energy Technology Club answers these two needs by operating as an international platform between both parties. Our mission is to monitor the global projects in energy production and distribution closely, to keep track of the major energy industry players and to give insight in the technology needs of these companies to our members.

If you are looking for a unique point of contact for innovative technologies, operating from the heart of Europe, you have found it.

Why you should get in touch with the Energy Technology Club?

The Club serves as a **single point of contact** for project developers, EPC contractors and government to do business with experienced Belgium-based players in the oil, gas, renewable & nuclear industries, by, among other things, providing a structured overview of solutions and project references.

The Club **increases visibility and creates synergies** for its members and aims to generate international business opportunities by organizing customer seminars, high-level network events, trade missions abroad and setting up joint marketing initiatives.

The Club constitutes a **unique executive business platform** for its members by facilitating networking between its members in Belgium and with organizations abroad; by organizing formal contacts with 'visionaries', venture capitalists and government organizations; by keeping its members up to date on technological developments and trends, and by informing them regularly on projects worldwide, among others through a monthly e-newsletter.

“It was a pleasure to meet the members of the Energy Technology Club and listen to them and their industry experiences / feedback. The event was an excellent opportunity to talk about Bechtel and how sellers can differentiate themselves in a difficult and changing market. Ultimately I found the event to be very informative, it allowed me to make good contacts and better understand the capability in the Belgian market.”

Andrew Cuniah

Manager of Procurement for London OG&C, Bechtel

■ ■ We have been a partner for several years now and I can only state that the Energy Technology Club is a major asset to Belgian companies wanting to promote their know-how, not only abroad but also to other Belgian companies. Since we joined, the organized trips, events, information sessions and networking opportunities have been of real value to us. Also the team behind the club is great to interact with and responds actively to the challenges we present them in order to continue differentiating the Belgian partners from companies based in other countries. Being an innovative and R&D service driven company active on an international scale, such platform is a must to be part of. ■ ■

Marc Vanderschueren

Sr. Business Development Manager - OCAS

■ ■ My colleague Jean-Philippe and I were delighted to be invited by Agoria to meet Belgium entrepreneurs involved in the Energy Industry at the Paris Embassy of Belgium. We highly appreciated the quality of the renowned Belgium hospitality and the valuable exchanges we had with all the participants. An experience to reiterate. ■ ■
